TL;DR   This is your chance to jump on a startup adventure and be part of the digital fitness revolution. But this is not about a 9-to-5 job. We don't settle for 'good enough' but strive for 'excellence'. We seek passionate and likeminded people that are eager to challenge the status quo!

Backend Software Developer (f/m)

kinastic is a Swiss start-up that develops a platform for the fitness industry. We have launched our digital coaching and fitness tracking solution for gyms in September 2018. Now, we take digital fitness coaching to the next level: we are currently developing a virtual personal coach, that analyses and learns from athletes' workout data to provide them with the best tailored workouts to reach their personal goals.

To grow our team and work on our vision we look for entrepreneurial and motivated colleagues to join our software development team.

The opportunity focuses on

* the development of highly scalable APIs and services that will be consumed by our mobile and web clients

Our tech stack

* Java/Kotlin, MongoDB, Kubernetes, Axon Framework
* Nice2have: GraphQL

Ideally, you

* are a nerd, a tinkerer, a curious and smart mind, who loves to solve complex challenges and to think outside of the box
* are keen to learn and apply new tools and frameworks
* have at least 3 years of experience in developing high profile applications using the technologies mentioned

* you have a solid understanding of testing, continuous integration and deployment practices
* own a self-directed working style and have a high willingness to proactively contribute to the product and the vision as a full member of the team
* have a university degree (at least BSc) in computer science and a good command in English (German is fine, too…)

You get

* the chance to work in an agile and highly motivated team as well as the opportunity to substantially contribute to kinastic's future

* flexible working hours and choice of workplace (although our offices are pretty cool)

Our mission statement

«We empower everybody to become the fittest versions of themselves through technology.»

Interested to work with us on the digital fitness revolution?

Send your documents to Andreas (hire@kinastic.com), we are happy to talk to you in more detail.
