TL;DR This is your chance to jump on a start-up adventure and be part of the corporate health management revolution. But this is not about a 9-to-5 job. We don't settle for 'good enough' but strive for 'excellence'. **We seek passionate and likeminded people that are eager to challenge the status quo!**

Frontend Software Developer (f/m)

kinastic is a Swiss start-up that develops the corporate health management platform of the next generation. We started with a digital fitness coaching and tracking solution for gyms and personal trainers in 2017. Now, we take the health promotion in middle to large enterprises to the next level with our virtual fitness and lifestyle coach for employees. A virtual coach which is highly adaptive and provides individual workouts, diet plans and mental health activities based on the user's needs and inputs.

To grow our team and work on our vision **we look for entrepreneurial and motivated colleagues** to join our software development team.

We are primarily looking for an expert in frontend development, but backend skills are also very welcome. **We encourage bringing in your own ideas!**

The opportunity focuses on:

* the development of a cross-platform app for iOS and Android
* the development of a web-based platform

Our tech stack:

* Core: TypeScript, React Native, react-navigation, Mobx
* Non-core: HTML5/CSS3, JAVA, Objective C, Swift
* *Backend: Kotlin, MongoDB, Kubernetes, Axon Framework, Spring Boot*

Ideally, you:

* are a nerd, a tinkerer, a curious and smart mind, who loves to solve complex challenges and to think outside of the box
* are keen to learn and apply new tools and frameworks
* have at least 3 years of experience in developing high profile applications using the technologies mentioned

* you have a solid understanding of testing, continuous integration and deployment practices
* own a self-directed working style and have a high willingness to proactively contribute to the product and the vision as a full member of the team
* have a university degree (at least B.Sc.) in computer science and a good command in English (German is fine, too...)

You get:

* the chance to work in an agile and highly motivated team as well as the opportunity to substantially contribute to kinastic's future
* the possibility to participate in the company via shares

* flexible working hours and choice of workplace (although our offices are pretty cool)
* the opportunity to bring in your own ideas and shape the product.

Interested in revolutionising corporate health management with us?

Send your documents to **José (hire@kinastic.com)**, we are happy to talk to you in more detail.
